Queen Creek Fire Department provides tips for heating a home safely

The high cost of home heating fuels and utilities has caused many residents to search for alternative home heating sources such as wood burning stoves, space heaters, and fireplaces. According to the U.S. Fire Administration, heating is one of the leading causes of residential fires. Over one-quarter of these fires result from improper maintenance of equipment, specifically the failure to clean the equipment.

The Queen Creek Fire Department would like to share the following tips from the U.S. Fire Administration to help residents stay warm during the upcoming cold weather. As a reminder, before starting any fires in your chimney, fire pit or stove, visit www.cleanairmakemore.com to verify whether burning is allowed. For more information about the Queen Creek Fire Department, visit www.queencreek.org or follow www.facebook.com/qcfire.

Please keep in mind that while smoke alarms can alert your family to a home fire, they cannot extinguish flames. Installing a sprinkler system may save your life.

Preventing Home Heating Fires

- Keep a 3-foot clearance between all heating equipment and anything that can burn.
- Inspect and maintain heating equipment regularly for safety.
- Be sure to have fixed space heaters installed by a qualified technician, according to manufacturer's instructions or applicable codes. Or, make sure a qualified technician checks to see the unit has been properly installed.

News Release

- When buying a new, portable space heater, make sure it has the label showing it is listed by a recognized testing laboratory, such as Underwriters Laboratories (UL).
- Space heaters should be turned off every time you leave the room and before going to bed.
- Keep space heaters at least 3 feet away from anything that can burn - including furniture, blankets, curtains, and paper products.
- Choose space heaters that turn off automatically if they tip over.
- Never use a space heater to dry clothing.
- Do not use your oven to heat your home.
- Install smoke alarms in every bedroom, outside each sleeping area, and on every level of the home. For the best protection, interconnect all smoke alarms throughout the home. When one sounds, they all sound.
- Test smoke alarms monthly.
- Install and maintain carbon monoxide alarms to avoid risk of carbon monoxide poisoning.

Wood Burning Stoves and Fireplaces

- Use a metal or glass fireplace screen to keep sparks from hitting nearby carpets or furniture.
- Be sure the fireplace or stove is installed properly. Wood stoves should have adequate clearance (3 feet) from combustible surfaces and proper floor support and protection.
- Wood stoves should be of good quality, solid construction and design, and should be evaluated by a nationally recognized laboratory, such as Underwriters Laboratories (UL).
- The stove should be burned hot twice a day for 15-30 minutes to reduce the amount of creosote buildup.
- Have your chimney inspected annually and cleaned if necessary, especially if it has not been used for some time.
- Don't use excessive amounts of paper to build fires in fireplaces. It is possible to ignite creosote in the chimney by overbuilding the fire.
- Make sure your fireplace has a sturdy screen to prevent sparks from flying into the room.
- Keep flammable materials away from your fireplace mantel. A spark from the fireplace could easily ignite these materials.

News Release

- Before you go to sleep, be sure your fireplace fire is out. NEVER close your damper with hot ashes in the fireplace. A closed damper will help the fire to heat up again and will force toxic carbon monoxide into the house.
- If synthetic logs are used, follow the directions on the package. NEVER break a synthetic log apart to quicken the fire or use more than one log at a time. They often burn unevenly, releasing higher levels of carbon monoxide.
- Do not use flammable liquids to start or accelerate any fire.
- Never burn charcoal indoors. Burning charcoal can give off lethal amounts of carbon monoxide.
- Allow fireplace and wood stove ashes to cool before disposing in a metal container.

Kerosene Heaters

- Read and follow the procedure in the owner's manual before you attempt to operate or service the unit.
- Learn the safety and maintenance procedures necessary to safely operate the heating unit.
- Always use water clear K-1 grade kerosene.
- Never use gasoline or any other volatile fuels in the unit.
- Never refuel the heater indoors, when it is hot, or in use.
- Do not fill the fuel tank past the full mark. The space above the full mark is there to allow expansion of the fuel when it is operated.
- Always provide adequate ventilation for the unit. Burning kerosene consumes oxygen, and produces carbon monoxide and other dangerous gases which may cause you to suffocate or have other respiratory problems.
- Check with your local fire department to make sure kerosene heaters are allowed in your community.

Electric Heaters

- Keep space heaters at least 3 feet away from anything that can burn - including furniture, blankets, curtains, and paper products.
- Check to ensure the heater has a thermostat control mechanism.

- More -

News Release

- Choose a heater that will turn off automatically if it tips over.
- Never dry clothes or store objects on top of the heater.
- Never use extension cords with electric heaters.
- Keep anything that may burn at least 3 feet away from the heater.
- Never allow children to play with, or around, the heater.
- Never place anything inside the grill on the front of the heater.
